Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 8.680; Variance 4.376; scale 1.984

Novel chemokines, e.g. thymus expressed chemokine - used for treating inflammatory conditions including asthma. Claim 3; Page 94-95; 202pp; English.

The present sequence represents human dendritic cell chemokine receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibodies which bind to the protein can be used in detecting or diagnosing various immunological conditions related to expression of the protein. The nucleic acid can be used for screening and isolating DNA clones for the chemokines, especially from other species. The chemokine can be used in the treatment of conditions associated with abnormal physiology or development, including inflammatory conditions such as asthma.
                               11-JUN-1998 (first entry)
Human dendritic cell chemokine receptor.

Rabbit high affinity II-8 receptor gene was isolated from rabbit peritoneal neutrophils and used as a source of poly(A)+ RNA, to produce a rabbit neutrophil cDNA library. 250,000 recombinant plaques were screened for those which hybridized to an antisense oligonucleotide (030015). This probe was designed based on the sequence derived from the second transmembrane domain of G-protein-coupled receptors. After tertiary screening, six plaques were kb in size. This insert was sequenced. The protein deduced from
                                                                                                                                                                                                                                                                                                                                                                                                                                                  04-APR-1993 (first entry)
Sequence in a high affinity recombinant rabbit interleukin-8 (IL-8) receptor polypeptide in R3R.
IL-8 receptor polypeptide; G-protein-coupled receptor.
Oryctolagus cuniculus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                kb in size. Disclosure; Page 51-54; 83pp; English,
A cDNA library constructed from human neutrophil mRNA in pRK5B was
transfected into COS-7 cells, and the cells were screened with 125I-
IL-8. The DNA sequence of isolated cDNA clone pRK5B.118rl.1,
encoding human IL-8 receptor, is given in Q80520 and the predicted
amino acid sequence in R68Bll. The receptor is used to raise
antibodies that neutralize the activity of PF4AR, e.g. IL-8 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                27 y-spcmletetlnkyvviiayalvfllsllgnslvmlvilysrvgrsvtdvyllnlalad 85

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A4-APR-1996 (first entry)
Recombinant high affinity interleukin-8 receptor subtype A.
Il-84, IL-8B: receptor; monochonal antibody; inflammatory disorder;
anaphylaxis; systemic lupus erythematosus; rheumatoid arthritis;
systemic necrotising vasculitis; psoriasis; asthma; allergy; ARDS;
adult respiratory distress syndrome; neutrophil detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         202 KLIMLGLELLFGFFIPLMFWIFCYTFIVKTLVQAQNSKRHKAIRVIIAVVLVFLACQIPH

Disclosure; Fig 2A-B; 74pp; English.

Monoclonal antibodies were raised against recombinant interleukin-8 (IL-8) receptor subtypes A and B from both human and rabbit sources (R80950-53 encoded by Q9949-52). The A subtype receptor (IL-8Tb) is a high affinity receptor and the B subtype receptor (IL-8Tb) is a high affinity receptor. The monoclonal antibody (mAb) pref. binds to the IL-8 binding domain thus blocking its activation. The mAbs are useful for treating inflammatory disorders (see key words) and for detecting the presence of neutrophils in a biological sample. The mAbs are also useful in the isolation of IL-8 receptors from a mixtur
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               83

Example 2; Columns 41-44; 62pp; English.

Antibodies directed against the interleukin-8 receptor B can be used to treat or prevent inflammation e.g. psoriasis, dermatitis, rheumatoid arthritis and particularly inflammatory bowel disease and chronic lung inflammation. When immobilised, these antibodies may be used to detect interleukin-8 receptor B expression in cells and tissues and for affinity purification of interleukin-8 receptor B from cells. A sequence encoding amino acids 23-314 of this fragment of the high affinity interleukin-8 receptor, was used to probe lambda gill con alibraries for the human interleukin-8 type B receptor.

LL8-R type 1-GBP 130 fusion protein.
Hybrid peptide; malaria parasite; Plasmodium falciparum; fusion protein; red blood cell; cytokine receptor; glycophorin binding peptide 130; GBPH; glycophorin binding peptide homologue; glycophorin A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6
                                                                                                                                                                                                                                                                                                                                                                                          claim 7; Fig 2; 78pp; English.
A cDNA library constructed from human neutrophil mRNA in the mammalian expression vector pRKSB was transfected into COS-7 cells as pools of 2500 clones. One positive pool from the first 58 transfections was partitioned into smaler pools until a pure clone (pRK5B.118r1.1) was obtained. The ORF encodes a protein of 350 amino acids which shares several features with the G-protein coupled receptors of the rhodopsin superfamily, including 7 hydrophobic (transmembrane) domains. The IL-8 receptor is a preferred PF4AR superfamily member of the invention. See also 029506 and 037107.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          rmvlrilphtfgfivplfvmlfcygftlrtlfkahmgqkhramrvifavvlifllcwlpy 258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nlvlladtlmrtqviqetcehrnnigraldateilgflhsclnpiiyafigqnfrhgflk 318

Hybrid peptides for binding cytokines, comprising a malaria parasite (Plasmodium falciparum) peptide (capable of binding to a red blood cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples of these hybrid peptides. R70123 is a fusion of interleukin B receptor type 1 and a receptor poptides. R70123 is a fusion of interleukin B receptor of these hybrid peptides. R70123 is a fusion of interleukin B receptor type 1 and plycophorin binding protein (GBP) 130. The use of cytokine receptors not normally found on RBCs means that the cytokine can bind narnessly to the RBC without deleterious effect. The RBC protects the hybrid peptides from excretion from the kidney, and due to steric hindrance prevents the cytokines binding to a receptor in another cell. GBP 130 or GBPH (GBP homologue) are the prefd. malaria parasite peptides used, others include EBA 175 (175 kDB erythrocyte binding antigen), PMMSA (pre major merozotte surface antigen) and the Duffy binding receptor molecule (eg. exhibited by Plasmodium vivax). These peptides in the surface of RBCs. The hybrid peptides are thus used to lower the levels of free cytokines in the circulation to reduce pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tltqk-rhl--vkfvclgcwglsmnlslpfflfrqayhpnnsspvc---yevlgndtakw 198

Monoclonal antibody against recombinant IL-8 receptor polypeptide - useful for treating inflammatory disorders, for detecting neutrophil(s) and for isolating IL-8 receptor from liq.mixt.

Claim 6; Fig 3A-B; 74pp; English.

Monoclonal antibodies were raised against recombinant interleukin-8 (IL-8) receptor subtypes A and B from both human and rabbit sources (R80950-53 encoded by 099949-52). The A subtype receptor (IL-8rA) is a high affinity receptor and the B subtype receptor (IL-8rB) is a low affinity receptor. The monoclonal antibody (mAb) pref. binds to the IL-8 binding domain thus blocking its activation. The mabs are useful for treating inflammatory disorders (see key words) and for detecting the presence of neutrophils in a biological sample. The mabs are also useful in the isolation of IL-8 receptors from a mixture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 95 fattlpiwaaskvhg-wtfgtplckvvslvkevnfysgilllacisvdrylaivhatrtm 153

Two primers (060148, 066149) were used to amplify human genomic DNA purified from leukocytes. Approximately 1000 clones were isolated after the initial amplification reation and probed with sequences specific for seven transmembrane receptors ILBRI, ATZR and R20. clones which did not hybridise were then chosen for sequence analysis. Three new clones were identified that appeared to encode seven transmembrane receptor segments. Two more primers (Q66151, Q66151) were used to isolate a full length version of one of these clones designated V31 (See Q66153). This is the sequence encoded by exon 3 of the V31 genomic clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-FEB-1995 (first entry)
Partial sequence of seven transmembrane receptor (V31).
Primer; seven transmembrane receptor; receptor; amplification; PCR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          154 -iqkrhl--vkficlsmwgvslilslpillfrnaifppnsspvc---yedmgnstakwrm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              scvgiwilatvlsipellysd-lgrssseg-amrcslitehve-afitigvagmvigflv 266
                                                                                    Example 2: Page 46-48: 100pp; English.

Example 2: Page 46-48: 100pp; English.

Two primers (060149) were used to amplify human genomic DNA purified from leukocytes. Approximately 1000 clones were isolated after the intial amplification reation and probed with sequences specific for seven transmembrane receptors IIRRI, AT2R and R20. Clones which did not hybridise were then chosen for sequence analysis. Three new clones were identified that appeared to encode seven transmembrane receptors segments. Two more primers (066151, 066152) were used to isolate a full length version of one of these clones, one of which was designated V31 and encoded this

Throlving the receptors.

Claim 1, Page 52-53; 100pp; English.

A human cDNA encoding the seven transmembrane receptor V31 was isolated by first amplifying a partial cDNA clone from a human consil cDNA library using two primers (Q66154, Q66155). The resulting amplified products were probed using two radioactively labelied sequences (Q66156, Q66157). A hybridising band was isolated from the gel and cloned. The resulting clone was isolated from a peripheral blood monounclear cell library using V31 specific primers (Q66159, Q66152).

Clone PBMC75 was isolated and the V31 cDNA insert in the clone was squence 378 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        275

                                                                                                                                                 rexpressed in Xenopus laevis occytes or transfected most cells, for screening ligands of IL-8 receptor and gene therapy

Claim 1; Fig 3; 39pp; English.

CDNA libraries from 2 and 3.5 kb fractions of poly(A)+ RNA from HL60 controphils sept of a sucrose gradient were made in UnizAP. The libraries were screened with F3R oligonucleotide probe (from rabbit IL-8 receptor) and under low stringency with a p2 cDNA probe synthesised from random primers, to isolated the clone p2, encoding human IL-8 receptor protein. The presence or absence of the DNA ecoding IL-8R or related MIP-2 receptor may be detected using portions of the p2 clone as probes. P2 may also be used to screen cfor ligands of IL-8R and may also be used in gene therapy to treat a patient deficient in IL-8R. The IL-8R is a gro receptor and has intracellular calcium-mobilising and ligand-binding properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                      7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              158 ICLVVWGLSVIISSSTFVFNQK-YNTQGSDVCEPKYQTVSE-PIRWKLLMLGLELLFGFF 215

Rabbit high affinity IL-8 receptor gene was isolated from rabbit peritoneal neutrophils and used as a source of poly(A)+ RNA, to produce a rabbit neutrophil cDNA library. 250,000 recombinant plaques were screened for those which hybridized to an antisense oligonucleotide (Q30015). This probe was designed based on the sequence derived from the second transmembrane domain of G-protein-coupled receptors. After tertiary screening, six plaques were isolated. The insert of one of these plaques, termed F3R was of 2.5 kb in size. This insert was sequenced. The protein deduced from the F3R clone demonstrates that it belongs to the family of G-protein-coupled receptors. The deduced protein sequence indicates seven putatuve transmembrane segments. A human peripheral blood leukocyte lambda gill cDNA library (5' stretch) was screened with a 652 bp ECORI/BamHI fragment (including nucleotides several human clones which hybridized to the rabbit IL-8 probe sequenced (Q30012).

Sequenced (Q30012).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               49 yfvviiyalvfllsllgnslvmlvilysrvgrsvtdvyllnlaladilfaltlpiwaask 108

Statistics:

swiss-prot35 1:swiss1 Pred..No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

Mean 49.069; Variance 98.526; scale 0.498
